

Steel Ball Caster 16mm Metal Ball

A Steel Ball Caster with a ball diameter of 16mm, this omni-directional metal ball caster is an ideal choice for the rear wheel of a robot design.

Code 2566

This 16mm Steel Ball Caster would make a great rear wheel choice for your robot/buggy designs as it features low starting and rolling resistance. It also runs very smoothly and more quietly than you might expect from a metal ball style caster.

The housing of the caster is also made of steel which encases the caster in such a way that the caster will not come out of the housing.

Features:

- Steel Ball Caster with a ball diameter of 16mm
- Ideal for robot rear wheels.
- Low starting and rolling resistance.
- Smooth running.
