**Description:** The surface mount plate make it easy to mount pillow blocks, hub mounts, or other Actobotics products to flat surfaces like workbenches, or wooden boards.

Actobotics is a robotics building system based around extruded aluminum channels, gears, precision shafts, and ball bearings. Thanks to the two standardized hole patterns, nearly all Actobotics components can be intuitively connected together. The wide range of components makes building complex electromechanical prototypes or finished projects a reality.
